

## **GIT 215 Final: Browser Testing - Joseph Owens**

When comparing my web pages in different browsers there are a few notable differences.:

-Firstly, firefox's submit button has a different border and text than the other two web browsers. Where chrome and edge both says "submit" on the button as they should and have a darker border, firefox's submit button says "submit query" and has a lighter, gray border instead. As well as this, the font in firefox appears to be different/more bold. This could be because firefox isn't using the first font I specified in the CSS.

-Secondly, edge has a line running through the screenshot, that does not appear in the browser, to display where the page cutoff is before scrolling. As well as this, edge has margins on the sides of the web pages whereas chrome, and firefox do not. The green also appears to be slightly darker in edge when compared to chrome or firefox.

These are all of the immediately discernible differences I found when comparing my web pages in different browsers.
